

Low Noise SiGe:C Bipolar RF Transistor

- Highly linear low noise RF transistor
- Provides outstanding performance for a wide range of wireless applications
- Based on Infineon's reliable high volume Silicon Germanium technology
- Ideal for CDMA and WLAN applications
- Collector design provides high linearity of 14.5 dBm OP1dB for low voltage application
- Maximum stable gain
 $G_{ms} = 21.5 \text{ dB at } 1.8 \text{ GHz}$
 $G_{ma} = 11 \text{ dB at } 6 \text{ GHz}$
- Outstanding noise figure $NF_{min} = 0.7 \text{ dB at } 1.8 \text{ GHz}$
 Outstanding noise figure $NF_{min} = 1.3 \text{ dB at } 6 \text{ GHz}$
- Accurate SPICE GP model enables effective design in process
- Pb-free (RoHS compliant) and halogen-free package with visible leads
- Qualification report according to AEC-Q101 available

SPICE GP Model

For the SPICE Gummel Poon (GP) model as well as for the S-parameters (including noise parameters) please refer to our internet website www.infineon.com/rf.models.

Please consult our website and download the latest versions before actually starting your design. You find the BFP620 SPICE GP model in the internet in MWO- and ADS-format, which you can import into these circuit simulation tools very quickly and conveniently. The model already contains the package parasitics and is ready to use for DC and high frequency simulations. The terminals of the model circuit correspond to the pin configuration of the device. The model parameters have been extracted and verified up to 15 GHz using typical devices. The BFP620 SPICE GP model reflects the typical DC- and RF-performance within the limitations which are given by the SPICE GP model itself. Besides the DC characteristics all S-parameters in magnitude and phase, as well as noise figure (including optimum source impedance, equivalent noise resistance and flicker noise) and intermodulation have been extracted.
