# $\pm 15 k V$ ESD-Protected, $10 \mathrm{Mbps}, 3 \mathrm{~V} / 5 \mathrm{~V}$, Quad RS-422/RS-485 Receivers 

#### Abstract

General Description The MAX3095/MAX3096 are rugged, low-power, quad, RS-422/RS-485 receivers with electrostatic discharge (ESD) protection for use in harsh environments. All receiver inputs are protected to $\pm 15 \mathrm{kV}$ using IEC 1000-4-2 Air-Gap Discharge, $\pm 8 \mathrm{kV}$ using IEC 1000-4-2 Contact Discharge, and $\pm 15 \mathrm{kV}$ using the Human Body Model. The MAX3095 operates from a +5 V supply, while the MAX3096 operates from a +3.3 V supply. Receiver propagation delays are guaranteed to within $\pm 8$ ns of a predetermined value, thereby ensuring device-to-device matching across production lots. Complementary enable inputs can be used to place the devices in a 1nA low-power shutdown mode in which the receiver outputs are high impedance. When active, these receivers have a fail-safe feature that guarantees a logic-high output if the input is open circuit. They also feature a quarter-unit-load input impedance that allows 128 receivers on a bus. The MAX3095/MAX3096 are pin-compatible, low-power upgrades to the industry-standard '26LS32. They are available in a space-saving QSOP package.

## Applications

Telecommunications Equipment
Rugged RS-422/RS-485/RS-423 Bus Receiver Receivers for ESD-Sensitive Applications Level Translators

Functional Diagram

Features

- ESD Protection:
$\pm 15 \mathrm{kV}$-IEC 1000-4-2, Air-Gap Discharge $\pm 8 \mathrm{kV}$-IEC 1000-4-2, Contact Discharge $\pm 15 \mathrm{kV}$-Human Body Model
- Guaranteed Propagation-Delay Tolerance Between All ICs: $\pm 8 \mathrm{~ns}$ (MAX3095)
$\pm 10 \mathrm{~ns}$ (MAX3096)
- Single +3V Operation (MAX3096)

Single +5 V Operation (MAX3095)

- 16-Pin QSOP (8-pin SO footprint)
- 10Mbps Data Rate
- Allow up to 128 Receivers on the Bus
- 1nA Low-Power Shutdown Mode
- 2.4mA Operating Supply Current
- Pin-Compatible Upgrades to '26LS32

## Detailed Description

土15kV ESD Protection

As with all Maxim devices, ESD-protection structures are incorporated on all pins to protect against electrostatic discharges (ESD) encountered during handling and assembly. The MAX3095/MAX3096 receiver inputs have extra protection against static electricity found in normal operation. Maxim's engineers developed state-of-the-art structures to protect these pins against $\pm 15 \mathrm{kV}$ ESD, without damage. After an ESD event, the MAX3095/ MAX3096 continue working without latchup.
ESD protection can be tested in several ways. The receiver inputs are characterized for protection to the following:

1) $\pm 15 \mathrm{kV}$ using the Human Body Model
2) $\pm 8 \mathrm{kV}$ using the Contact-Discharge Method specified in IEC 1000-4-2 (formerly IEC 801-2)
3) $\pm 15 \mathrm{kV}$ using the Air-Gap Method specified in IEC 1000-4-2 (formerly IEC 801-2)

## ESD Test Conditions

ESD performance depends on a number of conditions. Contact Maxim for a reliability report that documents test setup, methodology, and results.

## Human Body Model

Figure 4a shows the Human Body Model, and Figure 4b shows the current waveform it generates when discharged into a low impedance. This model consists of a 100 pF capacitor charged to the ESD voltage of interest, which is then discharged into the device through a $1.5 \mathrm{k} \Omega$ resistor.

IEC 1000-4-2
Since January 1996, all equipment manufactured and/or sold in the European community has been required to meet the stringent IEC 1000-4-2 specification. The IEC 1000-4-2 standard covers ESD testing and performance of finished equipment; it does not specifically refer to integrated circuits. The MAX3095/MAX3096 help you design equipment that meets Level 4 (the highest level) of IEC 1000-4-2, without additional ESD-protection components.

The main difference between tests done using the Human Body Model and IEC 1000-4-2 is higher peak current in IEC 1000-4-2. Because series resistance is lower in the IEC 1000-4-2 ESD test model (Figure 5a), the ESD-withstand voltage measured to this standard is generally lower than that measured using the Human Body Model. Figure 5b shows the current waveform for the $\pm 8 \mathrm{kV}$ IEC 1000-4-2 Level 4 ESD Contact-Discharge test. The Air-Gap test involves approaching the device with a charge probe. The Contact-Discharge method connects the probe to the device before the probe is energized.

## Machine Model

The Machine Model for ESD testing uses a 200pF storage capacitor and zero-discharge resistance. It mimics the stress caused by handling during manufacturing and assembly. Of course, all pins (not just RS-485 inputs) require this protection during manufacturing. Therefore, the Machine Model is less relevant to the I/O ports than are the Human Body Model and IEC 1000-4-2.

## Low-Power Shutdown Mode

Table 1 shows the functionality of the enable inputs. The MAX3095/MAX3096 enter shutdown when $G$ is low and $\bar{G}$ is high. In shutdown, all outputs go high impedance and the devices typically draw less than 1nA. The devices exit shutdown by taking $G$ high or $\bar{G}$ low. The typical shutdown exit time is 600ns.

## Table 1. Function Table

| $\mathbf{G}$ | $\overline{\mathbf{G}}$ | $\mathbf{( A - \mathbf { B } )}$ | OUTPUT <br> $\mathbf{Y}$ | DEVICE <br> MODE |
| :---: | :---: | :---: | :---: | :---: |

## Applications Information <br> Propagation-Delay Matching

The MAX3095/MAX3096 exhibit propagation delays that are closely matched from one device to another, even between devices from different production lots. This feature allows multiple data lines to receive data and clock signals with minimal skewing with respect to each other. The MAX3095 receiver propagation delays are trimmed to a predetermined value $\pm 8 \mathrm{~ns}$, while the MAX3096 delays are trimmed to a predetermined value $\pm 10 \mathrm{~ns}$.

128 Receivers on the Bus
The standard RS-485 input impedance is $12 \mathrm{k} \Omega$ (oneunit load). The standard RS-485 transmitter can drive 32 unit loads. The MAX3095/MAX3096 present a 1/4-unit-load input impedance ( $48 \mathrm{k} \Omega$ ), which allows up to 128 receivers on a bus. Any combination of these RS485 receivers with a total of 32 unit loads can be connected to the same bus.

## Fail-Safe Implementation

The MAX3095/MAX3096 receiver inputs guarantee a logic high output when the inputs are open circuit (no termination resistor used). This occurs when the transmitter is removed from the bus or when all transmitter outputs are high impedance. However, when the line is terminated and the transmitters are disabled, the differential voltage between the $A$ and $B$ inputs falls below the $\pm 200 \mathrm{mV}$ RS-485 sensitivity threshold. Consequently, the outputs become undefined. To maintain a failsafe receiver output while using a terminating resistor, input A must be biased at least 200 mV above input B . The resistor-divider network shown in Figure 6 is recommended.

## Package Information

For the latest package outline information and land patterns, go to www.maxim-ic.com/packages. Note that a "+", "\#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

| PACKAGE TYPE | PACKAGE CODE | DOCUMENT NO. |
| :---: | :---: | :---: |
| 16 QSOP | $\mathrm{E} 16+5$ | $\underline{\mathbf{2 1 - 0 0 5 5}}$ |
| 16 Narrow SO | $\mathrm{S} 16+5$ | $\underline{\mathbf{2 1 - 0 0 4 1}}$ |
| 16 PDIP | $\mathrm{P} 16+1$ | $\underline{\mathbf{2 1 - 0 0 4 3}}$ |

## 土15kV ESD-Protected, 10Mbps, 3V/5V, Quad RS-422/RS-485 Receivers

| REVISION NUMBER | REVISION DATE | DESCRIPTION | PAGES CHANGED |
| :---: | :---: | :---: | :---: |
| 2 | 1/10 | - Changed the lower specification in the $\mathrm{V}_{\mathrm{CC}}$ range from 3.0 V to 3.135 V . <br> - Updated the MAX specifications for the "Input-to-Output Propagation Delay" in the Switching Characteristics-MAX3096 table. | 3, 4 |
| 3 | 1/10 | - Updated all the parts in the Ordering Information to be lead-free. <br> - Updated the Y1 description in the Pin Description. <br> - Changed the Chip Information section to "PROCESS: BiCMOS". | 1, 6, 10 |
